Surprise eggs

There has been a new scientific discovery in India. What's inside these eggs? There is a family of amphibians called *Chikilidae*. Scientists don't have much information about them. They look like earthworms, but they are not, because they have backbones! They could also be small snakes but they are not poisonous. Researchers suspect that these amphibians eat earthworms. Scientists know that these animals live underground. They spend their entire lives under the soil!

Crack the code!

Change the numbers for letters using the mobile keypad. For example, if the number is 2, that letter could be A, B or C. Crack the code and reveal the message!

Vocabulary

- **backbones:** vèrtèbres
- **earthworms:** cucs
- **researchers:** investigadors
- **soil:** terra
